SUMMARY

Computer Engineering undergraduate who builds complete, working systems rather than isolated snippets — from a deployed, layered Spring Boot REST API to a production-deployed MERN application. Focused on backend engineering: clean API design, authentication, and data modeling that holds up under real use. Looking to bring that same hands-on ownership to a web and backend development team.

EDUCATION

Shah & Anchor Kutchhi Engineering College

Bachelor of Technology in Computer Engineering; CGPA: 8.28/10

Mumbai, India

2023 – Present

NES Junior College of Arts, Science and Commerce

Higher Secondary Certificate (HSC), Science; 84.33%

Mumbai, India

2021 – 2023

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C, C++, SQL

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Node.js, Express.js, RESTful API Design, JWT Authentication

Frontend: React.js, React Router, HTML5, CSS3, Tailwind CSS, Vite, Axios

Databases: MySQL, PostgreSQL, MongoDB (Atlas), H2

Tools & Platforms: Git, GitHub, Maven, Postman, Docker, Linux, AWS, Vercel, Render

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

SmartHire—Full-Stack Employee Onboarding Platform | [Java17, SpringBoot3, React, SpringSecurity, JWT, MySQLLive](#) | [GitHub](#)

- Built a full-stack employee onboarding platform — a Spring Boot REST API backend with a React SPA frontend — enforcing three-tier RBAC (Admin, Manager, Employee) via `@PreAuthorize` on every endpoint, secured end-to-end with JWT
- Designed a strictly layered backend (Controller → Service → Repository, DTO-only responses) with a global exception handler returning a consistent JSON error envelope, and a custom JPQL query auto-surfacing overdue tasks
- Built a role-aware React UI (auth context, protected routes, dashboard/batches/tasks views) where available actions adapt to the signed-in user's role, with overdue-task highlighting and client-side status filtering
- Deployed the backend to Railway with a MySQL plugin and H2/MySQL dev-prod profile separation, with the API live in production and the React frontend deploying to Vercel

Campus Lost & Found Portal | [React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSSLive Demo](#) | [GitHub](#)

- Architected a full-stack MERN platform with a 15+ endpoint REST API, JWT authentication, and role-based access control, powering a claim-based workflow for students to report, verify, and reclaim lost campus items
- Built an admin moderation system with live analytics, an item approval pipeline, Multer-based image uploads, and a self-resolve flow that automatically closes out pending claims
- Modeled Users, Items, and Claims in MongoDB Atlas via Mongoose, and took the system from local development to a live, production-ready deployment with the React/Vite frontend on Vercel and the Express API on Vercel/Render

RELEVANT COURSEWORK

Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Operating Systems, Computer Networks, Compiler Design, Cybersecurity Fundamentals
